

Settimo Grimaldi

Dr. Grimaldi has been conducting research on neurology and molecular medicine for over 35 years. During most of the 1980s he worked as a Fogarty Fellow, at the U.S. Institutes of Health in Bethesda, Maryland, in the fields of membrane structure and function and clinical endocrinology. Since 1996, he has directed an environmental medicine research program at the National Research Council in Rome, for the Institute of Neurobiology and Molecular Medicine's section on Molecular Medicine laboratory, where he manages and conducts research on the "interaction between electromagnetic fields and living matter."
